1. The Applicant's Representative has addressed our previous comments for the project. The culvert design and driveway location have been modified in accordance with actual field topography.
2. The Applicants have identified they wish to keep the driveway separate. Driveways will require review and approval by the NYSDOT.
3. Orange County Planning comments have been received and addressed in the response letter.
4. Public Hearing for the project is required. This office would recommend a Negative Declaration of Significance for the 2 lot subdivision.

T. of Newburgh Project 2014-19

Dear Chairman Ewasutyn & Planning Board Members:

On behalf of the Applicant for the above referenced project, Hudson Land Design (HLD) has revised the subdivision drawings in accordance with comments received at the August 21, 2014 Planning Board meeting, The McGoey, Hauser and Edsall (MHE) review letter dated August 18, 2014 and the Orange County Department of Planning (OCDOP) September 23, 2014 review letter. Below is a point-by-point response to each of the comments received.

**MHE 10/18/14 Review Letter**

1. The topographic survey has been updated via ground survey by Daniel Yanosh, L.S. within the development areas including the area of the wetland crossing and outlet channel. Soil test locations, water edge and some offsite wells and septic areas were also surveyed which have been updated on the map. The Lot 2 driveway has been moved farther away from the northerly property line at the wetland crossing to avoid impacts to the existing stone wall and adjacent property as a result of grading activities. A pre and post-construction watershed study has been completed for the proposed culvert crossing. The proposed culvert has been modeled in HydroCAD and the results show that post-construction flows are slightly less than pre-conditions while maintaining a similar water elevation within the wetland. The HydroCAD model and a watershed map is included in this submission for review. Five cross sections have also been provided along the Lot 2 driveway at the wetland crossing on Sheet 2 of the plan set.

2. The Applicant wishes to keep the driveways separate. The Lot 1 driveway has been moved to the south to provide adequate separation between the driveways in accordance with Figure 5A-3 of the NYSDOT Highway Design Manual (HDM) Chapter 5A draft regulations dated April 16, 2014. The HDM requires a minimum of 30 feet separation between driveways where the flare meets the edge of pavement. The plan shows 40 feet separation. Although the HDM regulations are in draft form and not effective yet, it is likely that they will be soon. Therefore, for the board's consideration the Applicant respectfully requests that the driveways remain separate. This is also subject to review by NYSDOT.
3. Notes have been added to the detail specifying where geotextile separation shall be used. In addition, biaxial geogrid is specified at the wetland crossing.
4. Dosing calculations have been completed for the pump system on Lot 1, and the detail has been updated with the information. The calculations are included in this submission for review.
5. The pump chamber provides 730 gallons of storage capacity above the high level alarm which is nearly two days of storage. Therefore, a backup generator is not required and the notes have been removed from the plans.
6. A "Certificate of Occupancy" note has been added to Sheet 1 of the plan set requiring a certified as-built prior to receipt of c.o..
7. The culvert has been revised to a 48" culvert buried 17" below the invert of the outlet channel. The 30% note has been removed.
8. See response 1. All soil tests have been survey located by Daniel Yanosh, L.S..

#### **OCDOP 9/23/14 Review Letter**

1. See response 2 to MHE above. The Applicant wishes to keep the driveways separate. Lot 1 driveway has been moved further to the south to provide adequate separation in accordance with NYSDOT requirements.
2. See response 1 to MHE above. The culvert has been sized accordingly.

#### **Additional Planning Board Advisory Comments**

1. The SBL number has been updated on page 4 of the Application. The page is included with this submission.

Please find the attached:

- Four (4) copies of revised page 4 of the application package;
- Twelve (12) copies of the Subdivision Plan Set (3 sheets per set);
- Three (3) copies of engineering calculations for MHE's review.

We respectfully request to be placed on your next available agenda to discuss the details of the project with you and to request that a public hearing be scheduled for the proposed action.

Should you have any questions or require additional information, please feel free to call me at 845-440-6926.

Sincerely,
